September 10, 2012

Subject: Letter of Recommendation

To whom it may concern:

Thrust-Tech Aviation, Inc (TTA) is a subcontractor for US Aero Services, Inc (USAS). TTA was hired by USAS on 4/5/2012 to assist in the reassembly and testing of CH-47 axial piston pump to support USAS as the prime contractor for AMCOM contract W58RGZ-11-D-0213. This is a 5yr contract for up to 800 pumps. This 1yr subcontract with TTA is for up to 25 axial piston pumps. The pumps provided to TTA for reassembly and testing have been returned with care and all work has been performed on time, as agreed and to USAS satisfaction. TTA has demonstrated during two product verification audits that they are extremely competent and capable of handling this effort. Many special tools have been required for work on this pump. TTA has an outstanding in house engineering department that has been able to make special tooling that meets or exceeds the DMWR required tools for this effort. This is extremely important, as it can save both the prime contractor and subcontractor precious time, and in some cases save cost. TTA is extremely cooperative when a particular request has been made and is very proactive with required status reports as well as all documentation required for this effort. USAS plans to continue work with TTA on this effort and many future programs.

Any questions can be directed to the undersigned.
